Introduction

This guide presents the minimum configuration required for using **Invoke ESEF**.

These requirements are based on a standard configuration. If you have a specific configuration, technical preparation workshops will be necessary to define the most appropriate configuration. Whatever the configuration, a technical study is recommended for a deployment adapted to the project to implement.

Moreover, **Invoke** reserves the right to modify these requirements according to the evolution of regulation.

Architecture

Invoke ESEF is a SaaS solution that relies on the **HTTPS** protocol.

Minimum Configuration Required

Invoke ESEF Client

The minimum requirements are listed below.

Type	Requirements
CPU (cores)	1
RAM (GB)	4
